MKT 4046 Marketing Analytics · UTech, Jamaica · Portfolio by [Your Name, ID]

From click to conversion

What three Alison courses taught me about getting noticed on TikTok, measuring every visit in Google Analytics, and turning that data into better campaigns.

Reach	TikTok Marketing Essentials
Track	Fundamentals of Google Analytics 4
Optimise	Online Marketing With Google Analytics

Why I took these courses

I enrolled in these three courses because [your real motivation: career goal,

business idea, curiosity about data] . Marketing decisions made on gut feeling are expensive, and I wanted to learn how to back mine with evidence.

Together the courses follow the path a customer takes. People first **reach** a brand on social media, the brand then **tracks** what they do, and finally it **optimises** campaigns based on what the numbers say. That is how this site is organised.

Total study time: about 11 to 14 hours across three courses.

Course 1 · TikTok Marketing Essentials · about 4 to 5 hours

Reach: using TikTok for business

What I learned

- TikTok is a business tool as well as an entertainment app, from brand profiles to full ad campaigns.
- The bidding and costing strategies for TikTok ads, and the two major categories of ad types.
- How a meme analysis framework works, and why meme marketing connects so well with Generation Z.
- How to use TikTok analytics and plan international reach, then design and scale an ad strategy.

> *challenge you faced.]*

Course 2 · Fundamentals of Google Analytics 4 · about 5 to 6 hours

Track: measuring behaviour with GA4

What I learned

- What the Google Marketing Platform is and which services it offers.
- How GA4 differs from Universal Analytics, including the admin panel and how data is collected.
- Why Google Tag Manager is used alongside Analytics, and how to set up a demo account with a parallel GA setup.
- The main report types and Explorations, plus the roles of BigQuery and Google Ads.

> *Reflection: [What surprised you about moving from UA to GA4, and what was hard.]*

Course 3 · Online Marketing With Google Analytics · about 2 to 3 hours

Optimise: turning data into better campaigns

What I learned

- The types of Google Ads, and how to link Google Ads and Analytics accounts.
- Why assigning a value to goals helps you judge which campaigns pay off.
- How to build unique, measurable links with the custom URL builder (try it below).
- How data-driven insights can raise conversion rates.

> *Reflection: [How this course tied the other two together for you.]*

Connecting the courses to my class

My Alison courses sit alongside MKT 4046 Marketing Analytics at UTech. Each one gave me a hands-on way to practise ideas from lectures.

> **Unit 1: Introduction to Marketing Analytics**
>
> Analytics exists to support management decisions, not just to produce reports. GA4 made that real: I can look at the data before choosing a page, post or campaign. [One decision you could now make with data.]

Unit 2: Segmentation, Targeting and Positioning

In class we grouped customers using RFM and cluster analysis. The Online Marketing With Google Analytics course showed a practical version: building customer segments inside Google Analytics. [A segment you would create, such as first-time visitors from TikTok versus returning visitors.]

Units 4 and 5: Customer Loyalty and Customer Lifetime Value

Retention, churn and lifetime value measure what a customer is worth over time. Assigning a value to goals in Google Analytics is the first step, because a conversion gets a dollar value I can compare across campaigns. [Example: if a contact form is worth $X to a business, which campaign earns it back?]

Unit 7: Digital Analytics

This unit is the closest match to my certification courses: applying Google Analytics to a marketing problem and analysing visits, pageviews and referral sources. GA4 gave me the tools (reports, Explorations, Tag Manager), and the TikTok course added the social side, including TikTok analytics and meme analysis. The Campaign lab below connects them, because a tagged link tells GA4 which source sent each visitor.

Unit 8: Data Visualization

Unit 8 is about dashboards and telling stories with data. GA4 reports and Explorations are visual tools for this, and I built this portfolio as a visual story. [A chart or report you found easiest to read, and why.]

> *Takeaway: analytics is a loop of reaching people, measuring what they do,*

> *learning from it and improving. [Two sentences on how this changed your view of marketing.]*

Campaign lab: a link I would actually use

Here is a working version of the custom URL builder from Course 3. Tag a link for a TikTok post, then watch for that source in GA4 reports (Course 2) to see if the campaign worked (Course 1).

Website URL

https://example.com/offer

Source	Medium	Campaign name
tiktok	paid_social	launch_week

Copy link

Next step in a real campaign: open GA4, go to Reports, then Acquisition, and compare sessions and conversions for each source.

What's next

These courses gave me a working vocabulary and a first toolkit: build the audience, measure the behaviour, improve the result. [Your overall takeaway in two or three sentences.]

Goals: [Example: earn Google's own Analytics certification, run a real campaign

for a small business, and practise building GA4 Explorations on live data.]

Next courses: [Example: SEO, email marketing, data visualisation.]
